# 12 Reasons

to Use Riverbed AppResponse

All-in-one packet capture, application analysis, transactional details, and flow export

Riverbed® AppResponse speeds the identification, diagnosis, and resolution of your most difficult network and application problems, helping to quickly determine root cause. It is a multi-purpose appliance with integrated functionality that combines continuous full-fidelity packet capture, real-time and back-in-time automated analysis, and enhanced flow export—all at the same time, in the same appliance.

AppResponse provides rich network and application analysis, with specialized analysis modules that deliver focused visibility into 60+ TCP and UDP apps, web transactions, SQL database transactions, and unified communications.

riverbed®

12 Reasons You Should Consider Riverbed AppResponse for Your Packet-Based Network and Application Troubleshooting:

Reason 1:

Continuous packet capture with simultaneous real-time analysis for packets traversing the network and on-demand/back-in-time analysis for packets stored to disk. Bonus: the ability to analyze multi-TB trace files without downloading those packets.

Reason 2:

Specialized web application analysis with high-definition, transaction-based details, including reconstructing web pages from network data with object-level detail to monitor true end-user experience.

Reason 3:

Powerful visualizations, like Response Time Composition Charts, which break response time into its 8 distinct components so you can instantly determine whether an issue is a network or an application problem.

Reason 4:

Troubleshooting for Zoom, Microsoft Teams, and other VoIP and video call quality issues in context with your network data.

Reason 5:

SQL database analysis including database sessions, SQL queries, stats, and timing info—without agents.

Reason 6:

Integrated packet-flow with the ability to export enriched flow data to Riverbed NetProfiler (flow analysis & reporting), providing app intelligence and response time, plus one-click contextual drill down to packets for fast troubleshooting.

Reason 7:

Track SSL/TLS handshakes metrics and certificates so you're never out of compliance, and decrypt traffic using the PFS API.

Reason 8:

Adaptive Thresholds that automatically baseline traffic patterns and alerts on significant behavioral changes so you can catch problems before they can affect users.

Reason 9:

Built-in support for DNS to automatically surface key aspects of DNS behavior.

Reason 10:

Integration with Wireshark and Riverbed Packet Analyzer Plus to speed real-time network packet analysis of large trace files using an intuitive graphical user interface and a broad selection of pre-defined analysis views.

Reason 11:

Cost-efficient storage with the ability to set multiple, separate capture streams with different storage amounts, different slicing policies, and different traffic selection criteria for better granularity and capture storage optimization.

Reason 12:

Consistent performance analysis across on-premises, private cloud, and public cloud environments, using the same platform.

riverbed®

Riverbed — Empower the Experience

Riverbed is the only company with the collective richness of telemetry from network to app to end user that illuminates and then accelerates every interaction so that users get the flawless digital experience they expect across the entire digital ecosystem. Riverbed provides two industry-leading solutions: the Riverbed Unified Observability portfolio, which integrates data, insights, and actions across IT to enable customers to deliver seamless digital experiences; and Riverbed Acceleration, which offers fast, agile, and secure acceleration of any application over any network to users, whether they are mobile, remote, or on-premises. Together with our thousands of partners, and market-leading customers across the world, we empower every click, every digital experience. Learn more at riverbed.com.
